

RUMPKE

Rumpke is working with architecture firms and contractors to build greener and cleaner businesses and homes. Our experts can help decrease disposal costs and conserve landfill space by recycling construction and demolition debris at the job site.

CONSTRUCTION RECYCLING

PROJECTS OF ALL SIZES

Rumpke provides management of construction waste for projects of all sizes. Whether you seek a green designation such as LEED certification, or are just looking to improve sustainability practices, Rumpke can recover a variety of construction and demolition materials. Rumpke can also aid in the design process by providing specifications for waste and recycling containers.

LEED CERTIFICATION

Rumpke can help your organization earn LEED credits through the U.S. Green Building Council, or other certification programs, by implementing a management plan for construction waste. Credits earned are based on the amount of material diverted from the waste stream. Rumpke will provide a detailed summary including site-specific information regarding final destination of your recyclables or waste material.

ACCEPTABLE MATERIALS

Rumpke can recover a variety of construction and demolition materials*, including:

- Metal
- Corrugated Cardboard
- Glass (must be accepted prior to job)
- Concrete
- Wood (untreated, clean wood and pallets containing no chemicals, adhesives or coatings such as paint, glue, tile or wall paper)
- Gypsum
- Universal Waste
- Electronic Waste
- Mixed Recyclables
- Compost
- Asphalt
- Masonry

*Materials vary by market.

FREE WASTE ANALYSIS

A free waste analysis can help your business discover cost-savings. An expert will examine the types and volumes of waste generated to design a comprehensive waste and recycling program. Rumpke will provide your business with a complete report of cost avoidance and recycling possibilities.
