## Permco Products

Permco is a leading manufacturer of high-pressure hydraulic gear pumps and motors, flow dividers, intensifiers and accessories. Both roller bearing and sleeve bushing series are available in a wide variety of sizes and configurations.

Starting as the Perfection Machining Company in 1964, Permco began designing and manufacturing replacement parts for the mining industry. In 1968 the name was officially changed to Permco and the development of replacement hydraulic parts was under way.

In 1974 Permco expanded its manufacturing capabilities to include cast iron parts, which enabled us to offer complete units. We later developed our sleeve bushing pumps, which have recently been rounded out with the introduction of the P124 series.

Permco, working with The Torrington Company, developed the patented "controlled stress" roller bearing, which increases pump and motor life by up to 30 percent. As a result, we recently extended our warranty from one year to two years.

Our commitment is to continue to develop and offer the highest quality product possible to our wide customer base, which includes both OEM's and distribution. We are also committed to working with our customers to supply them in such a way as to reduce their cost and to make their interface with Permco as seamless as possible. We are determined to do business the old fashioned way, while incorporating as much technology as makes sense to keep up with today's fast pace in business.
