What Happens When You Recycle?

WHAT HAPPENS TO YOUR RECYCLABLES AT RUMPKE?

Since 1932, Rumpke Waste & Recycling has been keeping neighborhoods and businesses clean and green. Our commitment to recycling and sustainability is at the very core of what we do. Rest assured that when you recycle material, that is part of a Rumpke program or is processed at a Rumpke facility, we are finding a good home for your recyclables. It's important to note that ***Rumpke is a processor, not an end user.*** Who are end users then?

End users are companies that take the sorted material and turn it into products. Rumpke has solid, long-lasting partnerships with viable end users that are part of our regional market operation. Rumpke distributes 95% of its collected recyclables to domestic markets and 80% to markets in the Midwest. Rumpke has fostered these regional markets over many years by supporting community recycling programs and building advanced recycling processing systems to sort recyclables by type.
